Mr Tarr,

Thank you for stopping by the ACP No Pipeline fast in front of DEQ

Thank you for supporting a decision to delay and further study the inevitable negative environmental impacts of ACP

Would you like copies of recent court decisions like the WVA decision last week where their DEQ cancelled the water quality permit for Mountain Valley?

Would it be helpful to know about the decision against FERC that they needed to re review a recent decision regarding incorporating climate change in their analysis?

The potential decision to cancel the ACP is NOT anti business< it will hurt the growing field of solar where NC is number two in the US only outpaced by California.

You do know that we have a Natural Gas Pipeline in NC that provides ALL the needed capacity for the whole state safely right now right ? (Its just not owned by Duke)

Of course you do that's why we have natural gas ! And it has been running safely for years

because oddly, older pipelines were built to higher standards than any pipeline built in the last 10 years (accidents up 500% in last 10 years)

Witness the pipeline construction problems in Ohio

NY State has also been very strong at stopping pipelines including where there are already built gas power plants.

If you would like those article links just ask

Thank you again
